

In addition to quality workmanship and durability, CECOR offers standard and special options so customers have a productive industrial cart fleet to meet their specific needs.

Hauling oily chips is a messy job. The oil accumulates in a puddle at the bottom of the cart. And dumping the load can be a sloppy task. Options available on the CECOR dumping container line make the job easier. Chip carts can be fitted with drain options to rid excess oil. After all, scrap haulers pay more for dryer chips. Proudly designed and manufactured in the U.S.A.

### DRAIN PLUG

3/4" drain plug prevents fluids from escaping from drain hole. Remove plug to drain fluids. *(Available on all models.)*

- Loop handle makes tightening easy.
- Handle stores on side of cart when draining.

### HINGED DRAIN COVER

Drain screen located inside of the cart prevents chips and other larger particles from clogging drain hole. *(Available on all models except L43 and L44 Series.)*

- Screen lifts up; cart cleans easily.
- Waste less coolant and recycle cleaner chips.
- Space-saving design allows more room for chips.

### FOUR-WHEEL SWIVEL CASTERS

CECOR's Heavy-Duty Dumping Carts are equipped standard with two fixed wheels and two swivel casters for the best combination of maneuverability and stability. Some models can be ordered with all-swivel casters for added maneuverability when carts need to move short distances in cramped spaces and turn around tight corners. *(Available on all models except 342 Series and Tilt Truck Series.)*

### SPECIAL OPTIONS

There are special options available to customize CECOR carts to meet specific needs. Please note that special options may require modifications to the standard carts. Not all options are available for all carts. Please contact us for more information.

Here's a sampling of special options to consider:

- Tow links
- Extended caster wheel legs
- Drain hose
- Drain rack & plug
- Custom bin dimensions and wheel configurations
- And much more
